Are you curious why so many Veterans are becoming software developers?

Join an interactive webinar with USO Pathfinder Colorado Springs and Turing School of Software & Design to learn more about coding and see if a future career in software development will be the right fit for you.

We'll cover:

- Why Veterans are successful in the tech industry

- What is coding and how to learn how to code

- Information about our alumni currently working in tech (like how their first salaries average $75,000+)

- How to to take the first step and try coding out for free with Turing School

---

Webinar Details

- Tuesday, September 22 from 11:00-12:00 *mountain standard time*

- Register for free for the Zoom information: https://www.eventbrite.com/e/software-development-with-uso-pathfinder-turing-school-tickets-118655382443

Questions?

- We are here to help! If you have you have questions about the webinar or Turing School, contact anna@turing.io or visit our website to learn more about our program at https://turing.io/

Hi! My name is Amy Holt and I am the Technical Programs Instructor at Turing School, which means that I teach people interested in learning how to code the fundamentals of programming. Before becoming a software developer, I was an elementary school teacher. I transitioned into coding because I love creative problem solving and wanted a more challenging career with a better work/life balance. Most people don't think they have what it takes to learn how to code or become a software engineer and I love proving them wrong! Join me for this webinar to take the first step into considering a career in software development and make sure to bring your questions!
